Liquor stores, bars & restaurants

Advanced ID Detection provides ID authentication to determine if IDs and passports are real or fake. Our approach is rigorous, secure and fast. AIDD ' technology forensically examines hidden features on **ALL** drivers' licenses and passports.

A few key differences:

- We conduct 30-60 forensic scans on each ID, rendering a decision in 2-3 seconds
- This includes detection of Hidden Micro Prints, Infrared Carbon Ink and full Imaging of the Front and Back of the ID
- Our system has the world's most comprehensive database of every single government issued ID in North America as well foreign countries, and is regularly updated.
- All our scans can be logged and retained per your preference
- All data is encrypted and can be customized to alleviate any privacy concerns your patrons may have.

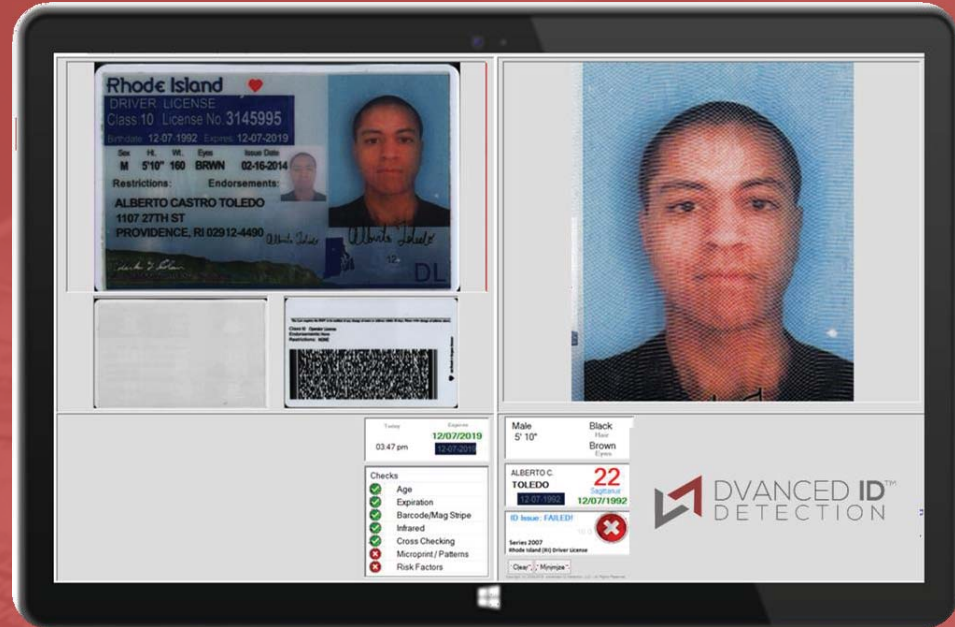

"Advanced ID Detection offers a far superior product to the scanner we previously used, which only scanned the bar code on the back of the ID. This offers us peace of mind in accepting out-of-state IDs with confidence" - Debbie Card, manager, Bradley Liquors, Boston, MA

Companies

HOW WE DO IT

1. Insert ID into scanner

2. Visual-AIDD classifies document for type, matching it to valid template from our proprietary library of >4,000 real ID types (includes all US, Canada, and Mexico with option for worldwide coverage)

3. Visual-AIDD conducts 30-60 Forensic tests to evaluate:

Hidden microprint – security patterns – UV image – infrared image – 1D & 2D barcode – magnetic stripe information – cross check encoded information to front of ID – Date of Birth/Age – Expiration Date – signs of tampering – passback alerts – banned list – high-res facial image for comparison – questions knowledge-based challenges

4. Visual-AIDD returns a clear  or  decision in 2-3 seconds
